Job Description

Mechanical engineers work on a project from the initial brief, through the design and development stage, to the testing of one or more prototypes, right through to final manufacture and implementation, designing and implementing cost-effective equipment modifications to help improve safety, reliability and throughput, managing projects using engineering principles and techniques, planning and designing new production processes, monitoring and commissioning plant and systems.

Electrical engineers design a variety of parts, equipment and systems that use electrical power to operate. They may design small electrical devices as well as large electrical systems, such as manufacturing equipment and electric distribution systems for utility companies. Electrical engineers are involved with design from conception to completion.

Chemical Engineer A chemical engineer is involved in the design, development, construction and operation of industrial processes for the production of a diverse range of products, as well as in commodity and specialty chemicals, designing plant and equipment configuration so that they can be readily adapted to suit the product range and the process technologies involved, taking environmental and economic aspects into account.
